INVESTMENT OBJECTIVE AND POLICIES OF THE FUND

As the Fund may invest a significant portion of its assets in below Investment Grade bonds, investors should note that an investment in the Fund should not constitute a substantial portion of an investment portfolio and may not be appropriate for all investors.

Investment Objective

The investment objective of the Fund is to aim to achieve total return (income plus capital appreciation) and, as a secondary objective, high current income.

Investment Policies

The Fund invests primarily in fixed and floating-rate below-Investment Grade corporate bonds that are listed or traded on Regulated Markets worldwide (that is, high yield securities). The Fund may invest up to 30 per cent. of its Net Asset Value in non-US securities. No more than 15 per cent. of the Net Asset Value of the Fund shall be invested in securities of issuers in Emerging Market Countries.

In addition, the Fund may purchase participations in or assignments of floating-rate mortgages or other securitised and unsecuritised commercial loans that are liquid and will provide for interest rate adjustments at least every 397 days and which may be secured by real estate or other assets. These participations may be interests in, or assignments of, the loan and may be acquired from banks or brokers that have made the loan or members of the lending syndicate. Such participations will not exceed 10 per cent. of the Net Asset Value of the Fund in aggregate.

Subject to the investment restrictions in Schedule II of the Prospectus, the securities will principally be listed, traded, or dealt in on a Regulated Market. The Fund may also invest up to 10 per cent. of its Net Asset Value in open-ended collective investment schemes within the meaning of Regulation 68(1)(e) of the Regulations for the purposes of maintaining liquidity or gaining indirect exposure to the assets referred to above.

The Investment Manager analyses economic and market conditions, seeking to identify the securities or market sectors that it thinks are the best investments for the Fund. Before selecting high yield corporate bonds, the Investment Manager evaluates each individual bond, including its income potential and the size of the bond issuance. The Investment Manager carries out a credit analysis of the issuer to determine whether the company has the financial ability to meet the bond's repayments. The Investment Manager seeks to maintain a well-diversified portfolio of high yield bonds that represents many different sectors and industries.

The Fund may employ derivatives involving transactions such as trading in futures and options and other derivative instruments for efficient portfolio management (such as, the reduction of risk, the reduction of costs, or the generation of additional capital or income for the Fund with an appropriate level of risk, taking into account the risk profile of the Fund as described herein and the general provisions of the Regulations) and for currency hedging purposes subject to the conditions and within the limits from time to time laid down by the Central Bank. A description of the techniques and instruments in which the Fund may invest is set out in the Prospectus in the section entitled "Investment Techniques and Instruments." The Fund may be leveraged up to 40 per cent. of its Net Asset Value as a result of its use of derivative instruments. The Fund uses the commitment approach to measure its global exposure.

It is anticipated that up to 100 per cent. of the assets of the Fund may be comprised of long positions achieved through direct investments and derivatives and that up to 5 per cent. of

the assets of the Fund may be comprised of synthetic short positions achieved through derivatives.

Subject to the foregoing, the Fund may invest in the securities identified below and described in the Prospectus in the section entitled "Further Information on the Securities in which the Funds May Invest":

To the extent that the Fund's assets are not fully invested in accordance with the objectives set out above, the Fund may invest the remainder of its assets in debt securities with maturities of less than one year, money market instruments, cash equivalents (such as government securities, discount notes, certificates of deposit, banker's acceptances, commercial paper, and treasury bills of investment grade and which are traded on Regulated Markets worldwide) or may hold cash. The percentage of the Fund invested in such holdings will vary and depend on several factors, including market conditions. For temporary defensive purposes, including during periods of high cash inflows, the Fund may depart from its principal investment strategies and invest part or all of its assets in these securities or may hold cash. During such periods, the Fund may not achieve its investment objectives.

The Base Currency of the Fund is the US Dollar.

Investment in the Fund is suitable for investors who are seeking long-term total return through a combination of income and capital appreciation, have a long-term investment horizon, are willing to accept a moderate level of volatility, and are willing to invest through a complete market cycle.

Forward currency exchange contracts may be used to reduce the risk of adverse market changes in exchange rates or to increase exposure to foreign currencies or to shift exposure to foreign currency fluctuations from one country to another. Warrants and other instruments which embed derivatives may be used to achieve exposure to a particular market or security instead of using a physical security. With the exception of forward currency exchange contracts, each of the above-mentioned types of FDI may be used for the purposes of gaining indirect exposure to the assets referred to above in the section of this Supplement entitled "Investment Policies."

A description of the FDIs that may be used by the Fund is included in the Prospectus in the section entitled "Types and Description of FDIs." The Fund's investment in derivative instruments will be subject to the conditions and within the limits from time to time laid down by the Central Bank.
